## Book Bin Features & Benefits

mk offers industrial-grade durable bins that have a spring-loaded bottom, requiring less bending by staff, and a wide, ergonomic handle, allowing staff to push it easily on both carpeted and hard surfaces throughout the library.

Brakes on two of the bin's four swivelling wheels allow secure placement and positioning anywhere. All bins are securely locked into the sorting system. Level sensors prevent the bins from overflowing, and mk LibManager software alerts staff when bins need attention.

Optionally, bins can be electronically locked in place once docked at the sorting system and different size bins are available.
