

# GateTracker

Track items that alarm the gates and manage visits from the circ desk

# GateTracker

Track items that alarm the gates and manage visits from the circ desk

## GateTracker Features & Benefits

When alarms sound, staff are alerted via a pop-up notification at a nearby workstation and identifies which item triggered the alarm; staff see the name of exit (if multiple), title, circulation status, security setting, timestamp, and item number (barcode). Other statistics - like number of visits - are populated in the software from the integrated people counter in the gates.

GateTracker works in tandem with your ILS via SIP2/NCIP/WebServices to retrieve item information and LibManager, where settings and configurations can be changed and statistics consulted. The statistical information is also presented in LibManager for single or multiple aisles and exits (per entrance or per branch), which allows staff and library management to export data in multiple formats. Staff can also track the number of visits each day and over time.

		 <table border="1" data-bbox="1068 1024 1450 1203"> <thead> <tr> <th>Gate</th> <th>Barcode</th> <th>Title</th> </tr> </thead> <tbody> <tr> <td>Entrance A</td> <td>8924762876</td> <td>My Favorite Homemade Cookies</td> </tr> <tr> <td>Entrance A</td> <td>8924762876</td> <td>A Book about the Past and the Future</td> </tr> </tbody> </table>	Gate	Barcode	Title	Entrance A	8924762876	My Favorite Homemade Cookies	Entrance A	8924762876	A Book about the Past and the Future
Gate	Barcode	Title									
Entrance A	8924762876	My Favorite Homemade Cookies									
Entrance A	8924762876	A Book about the Past and the Future									
<p>The gates issue an alarm and illuminate red</p>	<p>The pop-up notification appears in the lower portion of the screen</p>	<p>Staff see details of the item that triggered an alarm</p>
