mk Sneeze Guard Features & Benefits

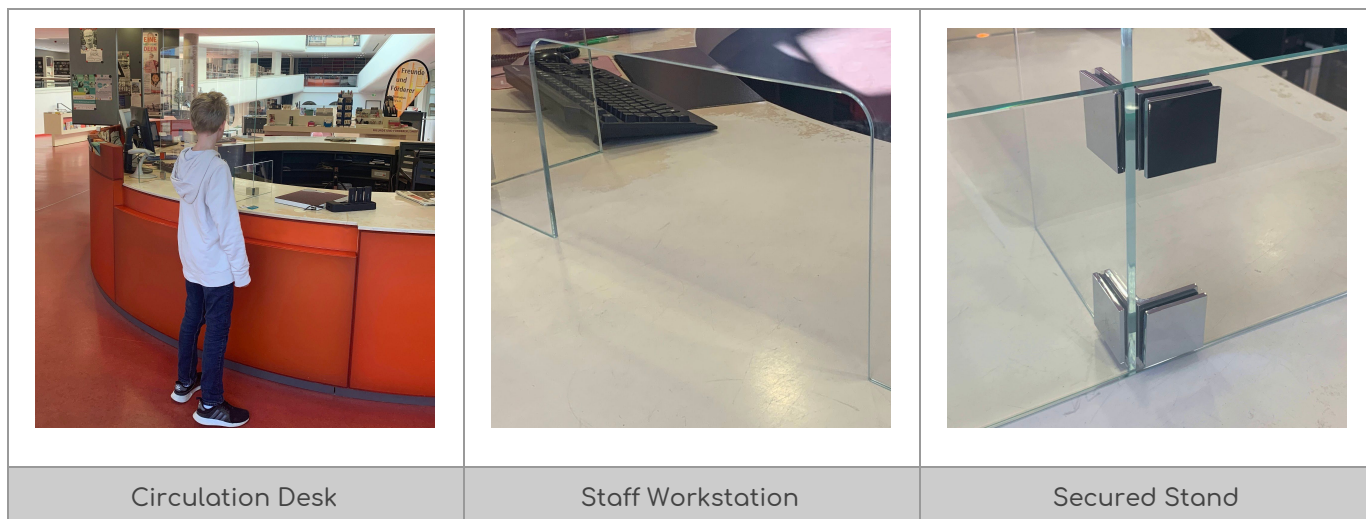

The mk Sneeze Guard can be placed on any desk with public contact in order to minimize the risk of infection for staff and patron.

The transparent design ensures to keep eye contact with each other.

The glass is made of safety glass, has a stable stand and is secured with rubber pads to avoid sliding. The protective glass is held by two 12" (30 cm) long feet.

An opening with a width of 16" (40 cm) and a height of 8" (20 cm) is provided.

The "real" glass we offer can be cleaned and disinfected very easily. Plexi- / acrylic- solutions do not offer these possibilities without damaging the material surface over time.
