

StaffStation Kit

Handle a range of tasks at the circ desk or in the staff workroom

StaffStation Kit

Handle a range of tasks at the circ desk or in the staff workroom

StaffStation Kit Features & Benefits

The UL-listed mk StaffStation offers library staff the ability to convert items from barcode to RFID and check items in and out at the circ desk or in the staff workroom. The library also has the option to automatically re-program its tags to harmonize data models over time or across branches.

The StaffStation accepts and responds to commands from the ILS without requiring SIP, so that staff can continue to use the screens and hot keys they are used to. mk StaffStations use the same RFID pad and software as the conversion stations, allowing staff to convert returns at the staff workstations to speed up conversion or convert on the fly. The mk StaffStation also allows single or multiple item processing and can be set to only process single items, if preferred. mk software can run as a mini-app window without having to close the current ILS session.

Staff does not have to "leave" the ILS for transactions; the mk StaffStation automatically identifies the ILS windows when staff checks items in or out and sets (or disarms) the security in the tag automatically. The StaffStation is ergonomic and compatible with different Operating Systems/VMWare and existing library hardware.

The StaffStation pad is fully shielded to avoid accident readings of items and comes with an integrated reader/writer module to ensure a compact design. It comes with a USB cable and power supply.
